

Skills

- **Programming Languages** : Java, C, C++, HTML, CSS, Javascript, PySpark, Python, PHP
- **Libraries and Frameworks** : Spring Boot, Node.js, React, Express.js
- **Tools** : MongoDB, MySQL, Git, REST API, Visual Studio, GitHub, postman, No SQL, SQL, Docker, Kubernetes, AWS, Microservices, PostgreSQL, Generative AI, Prompt Engineering, Linux/Unix, Excel, Google Colab, PyTorch, NumPy

Projects

ShreyFlixAI | AI-Powered Movie Discovery Platform | React, Vite, JavaScript, Tailwind CSS, React Router, Axios, Groq API

🔗 <https://github.com/ShreyMadaan/ShreyFlixAI>

- Developed an IMDb-inspired movie platform with **React 19**, implementing movie discovery, search, detailed movie pages, client-side routing, and a responsive Tailwind CSS interface.
- Built a **persistent watchlist** using React state and localStorage, with reusable components and feature/service-based frontend organization.
- Integrated the **Groq API** to generate personalized movie recommendations from users' saved movies, combining third-party API integration with an AI-powered recommendation workflow.

Product-Catalog-Service | Java (Spring Boot Microservice)

🔗 <https://github.com/ShreyMadaan/product-catalog-service>

- Built a Spring Boot-based Product Catalog microservice in three weeks, exposing RESTful CRUD APIs to manage product data with clean layered architecture (Controller → Service → Repository).
- Implemented unit and integration tests (JUnit, Mockito) covering core business logic and API endpoints, improving reliability and reducing regression risk.
- Containerized the service using Docker, enabling environment-agnostic builds and faster local setup.

SOLID-Principle | Java (OOP Design & Refactoring)

🔗 <https://github.com/ShreyMadaan/SOLID-Principle>

- Refactored a Java-based notification system across 6 iterative versions in two weeks, transitioning from tightly coupled design to SOLID-compliant architecture.
- Applied all 5 SOLID principles (SRP, OCP, LSP, ISP, DIP) to reduce inter-class dependency and enable adding new notification channels with 0 changes to existing business logic.
- Improved maintainability and extensibility by modularizing responsibilities across 10+ classes/interfaces, resulting in cleaner separation of concerns and easier testing.

Achievements

1. **Scaler**: Awarded a **100% scholarship worth ₹1,00,000**, secured **#1 PSP rank**, and completed multiple technical certifications and skill evaluations across **Java, SQL, DSA, and Software Development**.
2. **Software Development**: Built **full-stack and backend projects** using Java, Spring Boot, React, REST APIs, SQL, Docker, and AWS, following **production-oriented practices including testing, modular architecture, API design, and containerization**.
3. **Sports**: Represented **Delhi in 27+ national-level tournaments across multiple sports** and earned **medals at the Inter-University Chess Championships for four consecutive years**.

Education

Woolf University

2026

MS

in Computer Science | 9.8 CGPA

Scaler

2026

Specialisation in Software Development

Guru Gobind Singh Indraprastha University

2024

BE/B.Tech/Bs

in Computer Science Engineering | 8.7 CGPA
